

The Advance CT-NS42 Netbook Charging and Storage Cart from Da-Lite was designed with educational environments in mind providing a fast and efficient solution for charging and securely storing netbook computers. The cart holds and charges up to 42 netbook computers and includes a Power Management System that charges each netbook in the most energy efficient manner while allowing the fastest number to be charged simultaneously, up to 11 amps at one time. At the same time, battery life is preserved by charging each netbook completely before moving on to the next unit. A Monitoring System is included which allows users to view the charging status for each of the three shelves. The CT-NS42 also features secure access including locking front doors and a back panel with security screws that only allows access to the chargers. The cart comes standard with 5" casters, two swivel and two locking, and features a dove gray powder coated finish.
